EDUCATOR OPERATIONAL GUIDE

EduPath Teacher Mastery Handbook

A comprehensive guide for instructors on authoring questions, assembling adaptive assessments, conducting live 1-on-1 tutoring sessions, investigating integrity flags, and managing earnings.

Role: **Teacher / Tutor** | Main Hub: **/teacher-dashboard** | Integrity Engine: **AI Cheating Heuristics** | Classroom: **HD WebRTC Virtual Room**

1 Navigating Your Educator Command Center

`/teacher-dashboard`

The Teacher Dashboard provides a five-tab command center designed for complete instructional autonomy:

1. Overview Hub

View enrolled students, scheduled lesson counts, weekly hours, revenue charts, and the monthly payout ledger.

2. Question Bank

Author, edit, tag, and organize MCQ and True/False questions by subject, grade level, difficulty, and weight.

3. Test Builder

Assemble custom assessments, configure passing thresholds, set timed durations, and enable adaptive scaling.

4. Curriculum Units & Lessons

Structure course units, organize lesson order, and upload YouTube videos or printable study guide PDFs.

5. Billing & Tutoring Payouts

Track 1-on-1 session revenues ($35/session), study pass distributions, and monthly direct deposit payouts.

2 Authoring Question Banks & AI Generation

`/ai/question-generator`

Build high-quality assessment banks manually or supercharge creation using the AI Question Generator:

METHOD	CONFIGURATION PARAMETERS	BEST PRACTICE & NUANCE
Manual Question Entry	Subject, Grade (4–12), Difficulty (Easy/Medium/Hard), Weight (1.00–2.00), Options, Correct Key, and Explanation.	Always provide rich explanations. The AI study tutor uses your explanations to coach students who miss the question.
AI Generator Tool	Topic prompt (e.g. *"Photosynthesis light reactions"*), Grade Level, Target Quantity (5–20 Qs), and Cognitive Level.	The engine leverages Puter AI to generate curriculum-aligned distractors with zero hallucination. Review and 1-click import into bank.

Weighted Scoring: Set weight = 1.00 for basic recall, 1.50 for multi-step math, and 2.00 for high-complexity analytical items.

3 Assembling Tests & Configuring the Adaptive Engine

`Dashboard > Test Builder`

How to configure assessments that dynamically scale difficulty based on student responses:

Standard Fixed Tests

Select questions from your bank, specify total duration (e.g., 30 mins) and passing score (e.g., 70%). Ideal for mid-term exams and chapter reviews.

Adaptive Smart Engine

Toggle **"Is Adaptive"** on. The engine starts students on a medium item: consecutive correct answers elevate difficulty to hard; incorrect answers scaffold down to easy.

- ✓ **Placement Tests:** Toggle *isPlacementTest* to generate comprehensive subject diagnostics with automated grade recommendations.
- ✓ **Publishing:** Newly published tests immediately appear in enrolled students' recommended assessment queues.

4 Conducting Live Tutoring in the Virtual Classroom

`/classroom/:lessonId`

When students book a 1-on-1 session via the marketplace, launch the room directly from your Overview schedule:

📹 Video & Screen Sharing

Launch your webcam, unmute mic, and share application windows or problem set PDF worksheets.

🧠 Interactive Whiteboard

Draw geometric models, write algebraic steps, change marker colors (Blue, Green, Red, Black), or clear canvas.

📖 Synchronized Slides

Step through unit slides with next/prev buttons to ensure the student follows your presentation pacing.

CLASSROOM DOCK	TEACHER ROLE	STUDENT EXPERIENCE
Agenda Checklist	Click topics as you finish them (Warm-up, Theory, Practice, Q&A).	Student sees checkmarks appear live, keeping the session structured and transparent.
Live Q&A Chat	Answer typed student questions, paste formula snippets.	Encourages shy students to communicate comfortably during problem solving.
End Session Bridge	Click **"Finish & Launch Checkpoint"**.	Marks lesson complete, prompts student to take a 5-question retention quiz, and credits your payout balance!

5 Monitoring Academic Integrity & Cheating Telemetry

`/admin/cheating-detection`

EduPath tracks session heuristics without invasive screen recording or intrusive biometric surveillance:

🚨 Window Blur / Tab Switch

Detects when a student navigates away from the exam tab to search for external answers.

⚡ Answer Speed Anomaly

Flags multi-paragraph comprehension questions answered in under 3.5 seconds.

📈 Uncharacteristic Score Jump

Flags a sudden jump from a 45% baseline to 100% on hard-difficulty questions.

> 🚓 **Triage Protocol:** Review the Confidence Score (0–100%) and timeline logs. Choose **"Mark as Reviewed"** (mild flag), **"Clear Flag"** (false alarm), or **"Require Retest"** (blatant cheating).

6 Student Gradebook Notifications & Earnings Payouts

`Dashboard > Billing Ledger`

🔔 Automated Gradebook Alerts

Whenever an enrolled student finishes a checkpoint or unit test, you receive an automated notification: *"Alex Johnson submitted Linear Equations (92% - Proficient ✅)"*. Click the alert to inspect question-by-question telemetry.

💰 Monthly Payout Schedule

Tutoring earnings are distributed on the 1st of every month via direct deposit. Track accumulated lesson fees ($35.00/session) and active subscription quotas under the Overview ledger table.

🌟 Educator Checklist for Maximum Student Engagement

- **Profile Bio:** Keep your teacher profile up to date with grade levels taught.
- **Agenda First:** Always outline 3–4 session goals at the start of a lesson.
- **Interactive Whiteboard:** Encourage students to draw their work on canvas.
- **Rich Explanations:** Add step-by-step reasoning to all bank questions.
- **Checkpoint Assessment:** Trigger post-lesson quizzes to measure retention.
- **Integrity Review:** Check your Cheating Detection alerts weekly.
